SEROLOGY

Description	Result	Unit	Ref.Range
CRP (C-REACTIVE PROTEIN)			
C- Reactive Protein (CRP) Quantitative	3.80	mg/l	0 - 6

CRP is an acute phase reactant which is used in inflammatory disorders for monitoring course and effect of therapy. It is most useful as an indicator of activity in Rheumatoid arthritis, Rheumatic fever, tissue injury or necrosis and infections. As compared to ESR, CRP shows an earlier rise in inflammatory disorders which begins in 4-6 hrs, the intensity of the rise being higher than ESR and the recovery being earlier than ESR. Unlike ESR, CRP levels are not influenced by hematologic conditions like Anemia, polycythemia etc.
